The resources above will direct you to studies that indicate the effectiveness of **Ivermectin** and **Hydroxychloroquine** for Covid-19. They will also tell you how you can get access to these medications. In addition, they give you suggestions for preventative protocols/supplements to take (see reverse side). These supplements can be very helpful in preventing Covid-19. Some other less expensive venues to purchase Ivermectin are available: canadianone.approved-medication.com, healthworld.hellpinmeds24.net, onlinehellpinmeds24.net, and www.medshopcpl.com. (Search for '**Stromectol**', the generic name). These will take longer to get because they aren't from the United States.

Local medical facilities/physicians are not providing this information. If you are diagnosed with Covid-19 you will be sent home and instructed to take Ibuprofen or Tylenol. The early onset of Covid-19 is the most critical time to treat the virus; *you must advocate for yourself!*

This is a prophylactic protocol for Covid 19

(useful for vaccinated and unvaccinated people)

- Gargle (don't swallow) with antiseptic mouthwash with cetylpyridinium chloride (Scope, Act, Crest)
- Vitamin D3 1000-3000IU/day* (People with lower Vitamin D levels have a greater tendency towards dying from Covid 19)
 - Vitamin C 500-1000 mg 2x day*
 - Zinc 30-40 mg/day (elemental zinc)* (Zinc prevents the virus from replicating) • Quercetin 250 mg/day* (Quercetin opens up the cells in your body so that zinc can get inside your cells, where it works.)

*There are different dosages for these depending on the particular protocol you follow. The different protocols can be accessed on the websites of the resources listed on the reverse side of this paper. You may want to check to make sure the supplements don't interact with other medications you are taking.
